CHETAN JOSHI

TECHNICAL LEVEL DESIGNER

LEVEL DESIGN · GAMEPLAY SCRIPTING · 3D BLOCKOUT

Udaipur, Rajasthan, India • cj3243850@gmail.com • cjx-gamedev.vercel.app

SUMMARY

I design levels and I write the code that makes them playable. Two years of self-driven work across competitive arenas, horror labyrinths and high-speed traversal maps — mostly in Unity, now moving into Unreal Engine 5 C++. I care about how a space feels to move through: sightlines, pacing, and where the player's eye goes. I script my own prototypes so design ideas don't wait on a programmer.

SKILLS

Blockout & Layout · Metrics & Pacing · HTML & javascript · Playtests & Iteration · Level Design Document · C# , C++ · ProBuilder · Unreal Greyboxing · Gameplay Mechanics · Game UI & HUD · Blender 3D Modeling · Texture Atlasing · Git / GitHub · Team Direction

EXPERIENCE

Lead Developer & Level Designer ThroneLeaf Games — TenGent Parkour

- Led a small team on a high-speed parkour platformer and shipped it on itch.io.
- Wrote the kinematic character controller and movement mechanics in Unity C# myself, so I could tune level geometry against how the movement actually felt.
- Designed 7 linear obstacle gauntlets plus an interactive lobby hub, all on a strict metric grid so they could be reworked fast.
- Modelled 50+ assets — obstacles, modular buildings, props — and built the whole UI.

Level Designer Devil's Legacy — indie collab

- Designed the final dream sequence: a claustrophobic corridor labyrinth that builds into high-tension pursuit.
- Used layout and sightlines to keep the player deliberately disoriented.

Environment & Level Designer As The Stars Fall — indie collab

- Greyboxed the "Green City" street grid on tight low-poly metrics with clean topology (0 n-gons).
- Set up one shared texture atlas for the whole block.

SELECTED WORK

- **Tactical 6v6 Arena** *(Unreal Engine)* — CTF arena built on lane timing, two-tier verticality and cover staging.
- **Citadel Blockout** *(Unity)* — full pipeline from modular whitebox to finished medieval castle art.
- **Urban Transformation** *(Unity)* — whitebox to stylized night city, gameplay flow kept intact.
- **Sci-Fi Asset Pack(blender)** — tower, combat robot, ring ship and props, optimized for real-time on mid GPU.
- **Run & Fight** *(Unity)* — 2D action prototype, sprite animation and combat logic.

EDUCATION

B.Tech, Computer Science Engineering — Techno India NJR Institute of Technology (RTU), Udaipur
Currently 2nd year (3rd semester)

ADDITIONAL

- 2+ years of independent 3D and game development practice.
- Linux user (Arch, EndeavourOS) — tuned for 3D rendering work.
- Currently building Unreal Engine 5 C++ skills for gameplay and level scripting.
